

# Plis

The Plis chair combines a space-saving design with a sleek look that makes it ideal for training spaces and cafes.

## Lightweight and beautiful

Plis is molded as a single piece from automobile-grade polypropylene, reinforced with glass fibers. The result is a chair that's durable enough to pass BIFMA testing, yet weighs only 9 pounds.

### Functional elegance

Inspired by the crinkled effect of plisse silk, Plis chair is made from glass-fiber-reinforced polypropylene that flexes comfortably as you move.

### Moves with you

The chair's material flexes as you move, for greater comfort than standard training chairs.

### Stackable

Plis is available in 6 colors and stacks for easy storage.

# Product Specification

CPS10GS
